

SOFT437 Assignment 1 Report: Marking Schema

Team number:

Team Members:

<u>Quality of the report</u>	<u>/100</u>
-------------------------------------	--------------------

- | | |
|---|-----|
| - An introduction explaining SPE and performance modeling. | /5 |
| - The report should present the reasons for using SPE to model the performance of this online bookstore. | /5 |
| - Show the high-level structure of the online bookstore. | /5 |
| - Show the detailed design of the online bookstore. | /10 |
| - Select critical use cases for performance, and explain the criteria for your selection. | /5 |
| - A sequence diagram for each of the identified critical use case (3 use cases at most). These diagrams should make use of references which can be expanded for more detail. | /39 |
| - A software execution model for each sequence diagram you created. You will need to add resource estimates for each node of your software execution model, and solve the model. The processing overhead matrix is based on table 5-1 from the course's textbook. | /21 |
| - Create a deployment diagram to show the distribution of the components of the on-line bookstore of your design. | /5 |
| - A conclusion which explains your findings and recommendations for the corporation deploying the online bookstore. You should also discuss any troubling performance problems you uncovered through the model that you created. | /5 |

<u>Private comments on the performance of other team members</u>	<u>(optional)</u>
---	--------------------------

- Send directly to Pouya, your TA (22pf2@queensu.ca)

Please specify the percentage of everyone's contribution to each section of the written report and the presentation. Please also specify your own contribution to each section.
